

ACTEGA Kelstar Technical Bulletin

Aqueous Coatings for Ink Jet Printing

ACTEGA Kelstar is pleased to introduce a line of aqueous coatings for Ink Jet printing. In the past, it has always been difficult, if not impossible to ink jet print on top of aqueous coatings for such applications as bar codes or imprinting lot numbers.

The new ink jet receptive coatings are formulated with the latitude and capabilities to accept a diverse range of ink jet inks with varying surface tension that would enable the printer to achieve even and uniform reproductive qualities with extremely fine type. The new ink jet receptive coatings can be used as versatile top coatings for folding cartons and commercial printing.

The new ink jet receptive coatings are:

- Starkote AQ-585 Satin Coating
- Starkote AQ-586 Gloss Coating
- Starkote AQ-587 Matte Coating

The new ink jet receptive coatings have the ability to be:

- UV coated
- Foil stamped
- Work & turned

Contact ACTEGA Kelstar at 856 829 6300 or info.actega.kelstar@altana.com for additional information or technical assistance.
