## CTP Plate Cleaner

### CTP Plate Cleaner

CTP Plate Cleaner is formulated to have excellent compatibility with all types of plates, but is most notable for its effectiveness in cleaning and desensitizing all different types of CTP plates in today's market.

This product works well on Thermal, Visible Light Laser, and many other types of CTP plates. ACTEGA Kelstar's CTP Plate Cleaner has effectively been used on Kodak, Creo, Spectratech, Fuji, and Agfa brands of CTP plates.

Plate processing and plate treatments for CTP plates differ from conventional plates and require a special type of chemistry and cleaner.

- **High Level of Solvency to Remove Ink & Tough Scratches**
- **Compatible with All CTP Plates**
- **Excellent Short Term Protection**
- **No Image Loss**

### Plate Cleaner and Scratch Remover

CTP Plates are more sensitive and leave the plate surface less durable and less hydrophilic and require a formulation that will clean and desensitize without harming the image. ACTEGA Kelstar's CTP Plate Cleaner is gentle enough on the plate, yet still has the cleaning power and solvency to remove the toughest scratches as well as ink and pigments.

CTP Plate Cleaner is an emulsion composed of surfactants, solvents, and cleaning aids to provide the printer with a one-step process to clean and desensitize CTP plates. It can be applied directly to a rag or sponge and wiped onto the plate to remove the deepest of scratches while restoring an excellent short-term protection film to the plate. Shake Well.

CTP Plate Cleaner is available in quarts packaged 12 per case, gallons packaged 4 per case and 5 gallon cube containers.
